CAMEO issues

**LtCol Jarosław OKRENT
AO IT&S CIS DIRECTORATE
EUROPEAN UNION MILITARY STAFF**

THIS PRESENTATION IS: LIMITE

Agenda

- Information Management – current status
- IM – issues to solve
- Proposed Migration to new structure
- Other issues
 - Naming convention,
 - Broken card readers,
 - check of implemented security roles.
- Action List

IM– current status

- CAMEO IM - (procedural aspect based on EOW SECOPS)
 - KEY Personnel
 - SCISM – IM policies (EUMS)
 - CAMEO Manager – IM guidance and impl. (NOC)
 - MILSAT CAMEO Manager
 - Partner CAMEO Manager
 - Content Managers

- CAMEO IM (functionality- technical aspect based on manual)

Roles:

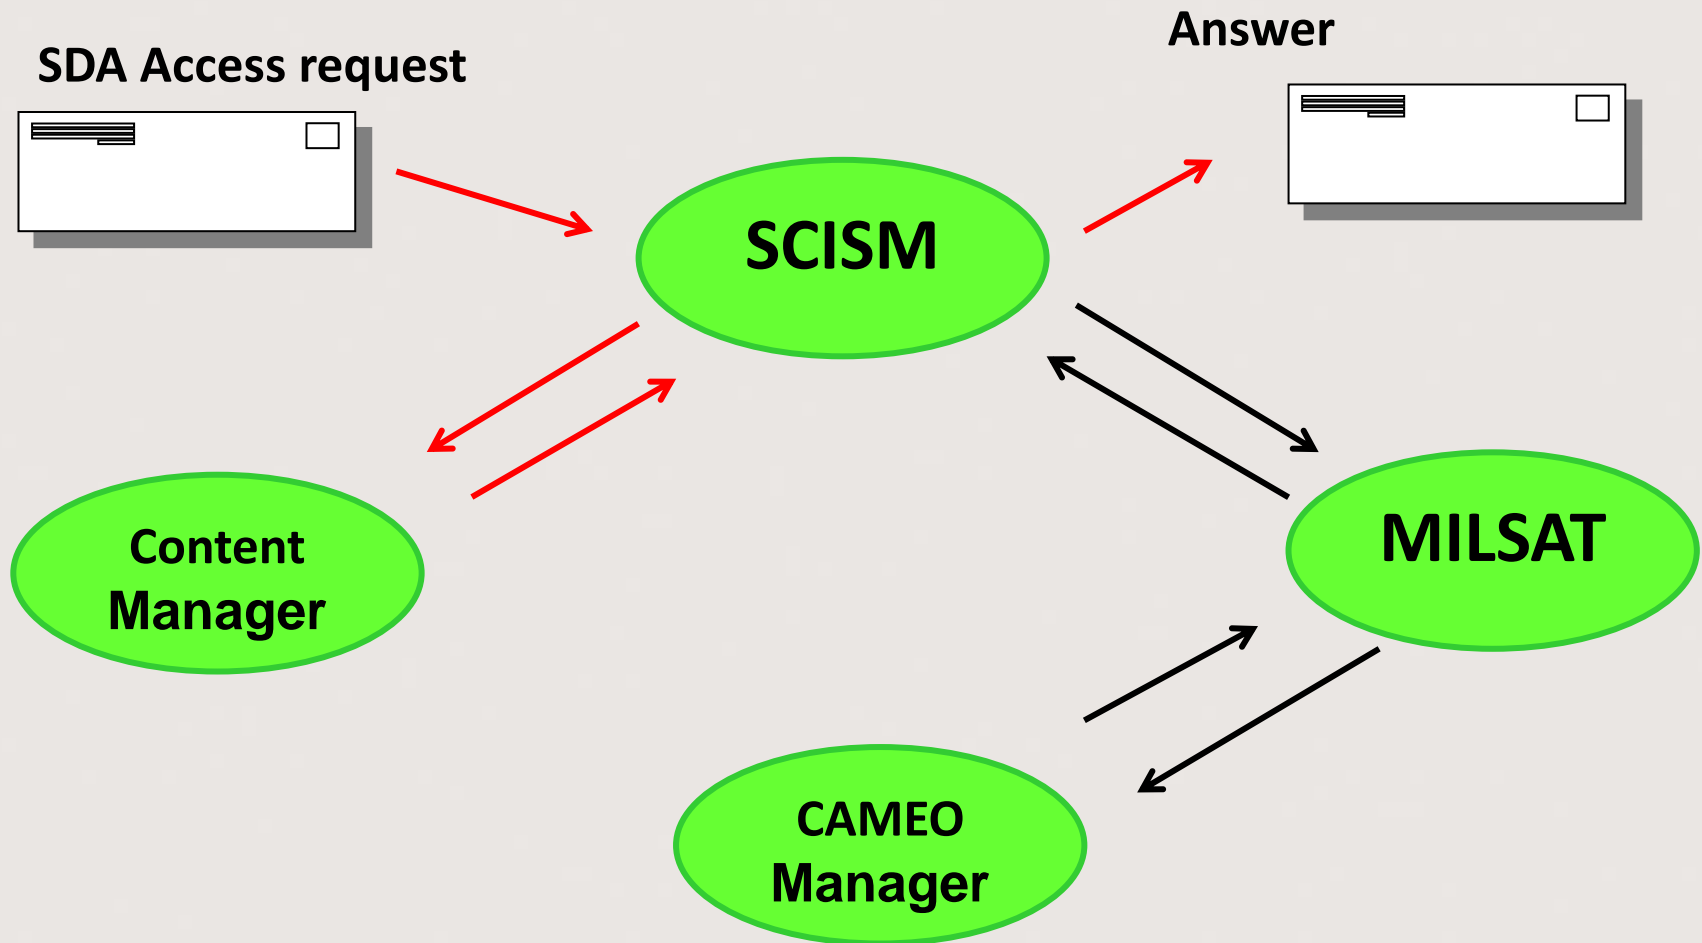

- CAMEO Manager
- CAMEO Administrator
- Content Manager
- Contributor User
- Associate User

IM – issues to solve

- Technical aspect – access privileges
- Legal aspect
 - Need to Share
 - Need to Know

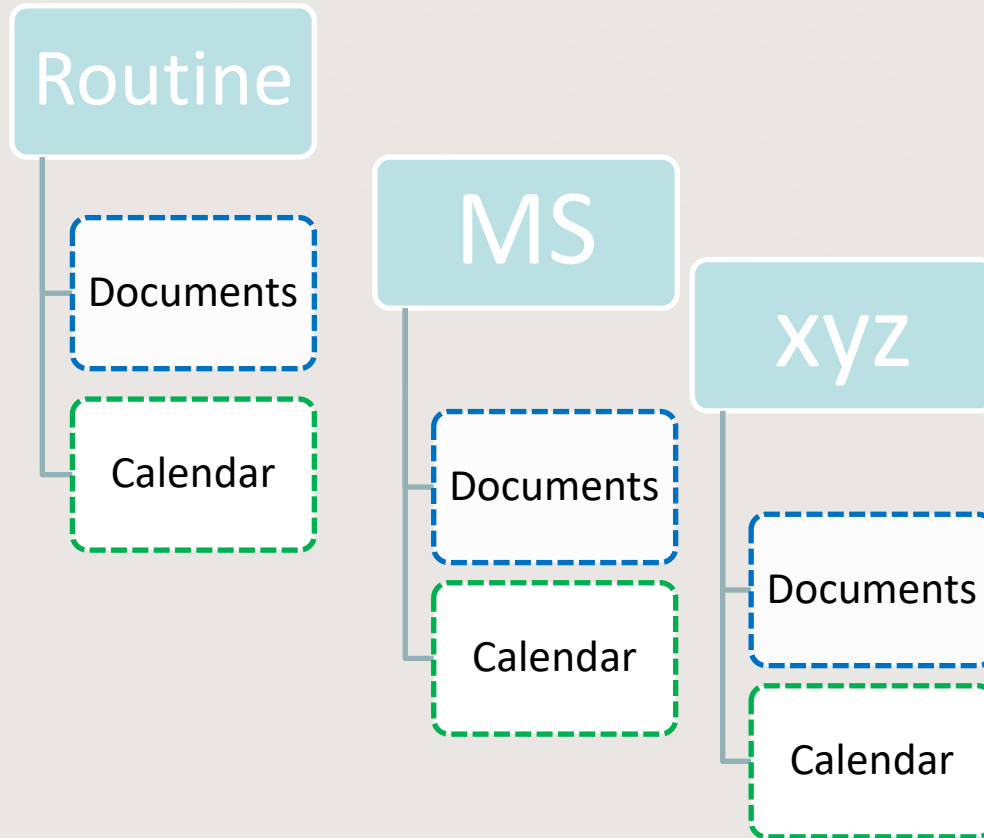

IM – issues to solve

IM – issues to solve

IM – issues to solve

Current structure should be change:

- **Naming**
- **Management difficulties**

Proposed Migration to new structure

Findings after Feasibility Study

CAMEO Roles

- CAMEO Administrator & Managers: only at EEAS - EUMS level (CAMEO Adm & MILSAT).
- Content Managers: to be defined for each SDA/subSDA.
- The current role of the Content Manager should be upgraded in order to grant him rights to assign/delete roles/users to/from his corresponding SDA and subSDAs.

What to do with the current structure?

- 1st choice: Use the archive function of CAMEO

Drawback → after their archiving, the SDAs are accessible only by the CAMEO Managers.

- 2nd choice: Move all existing SDAs under a single one (e.g OLD_SDAs)

Drawback → It's not possible for CAMEO Managers to move SDAs.

Maybe this is possible for CAMEO Administrator?

New SDA structure

under ROOT

- One SDA per Member State
- One SDA per extraordinary user community
 - EUMS
 - SATCEN
 - ...
- Special SDAs
 - **Routine**: for posting information of general interest
 - **Exercises** : with subsequent subSDAs per exercise
 - **Operations / Missions** : with subsequent subSDAs per Operation/Mission.
 - ...

Principles for the new SDA structure

- EEAS - EUMS to define the top level SDA structure.
- One Content Manager assigned for each top level SDA, and becomes the Single Point of Contact for CAM and other users when it comes to his assigned SDA.
- Top level SDA CMs will create the structure inside their SDAs and assign user roles.
- All users should be able to see all the top level SDAs and the structure one level below in order to request access rights to the CMs.

Example of MS SDA structure

MS1

Top level SDA created by CAMEO Manager (CAM) at EUMS level.
All default new user groups assigned as "associate" by EUMS.
One MS "Power" Content Manager (PCM) assigned by CAM MS.
MS PCM creates SubSDAs and assigns roles per user.

Documents

Created by default.
Accessible by all associates (i.e. all CAMEO groups/users)
Only for public info (e.g a list of all SubSDAs Content Managers)

Calendar

SubSDA1

One Power Content Manager assigned by MS PCM for each SubSDA
Power Content Managers assign roles/user for their SubSDA

SubSDA2

OHQ

Specific subSDAs.
Same rules as all other subSDAs
Only for MS that have O/FHQs
Proposal: common structure for all OHQs (TBD by EUMS & OHQ community)

FHQ

Example of Exercise SDA structure

Exercises

Top level SDA created by CAMEO Manager (CAM) at EUMS level.
All default new user groups assigned as "associate" by EUMS.
One EUMS "Power" Content Manager (PCM) assigned by CAM.
MS PCM creates SubSDAs and assigns roles per user.

Documents

Created by default

Accessible by all associates (i.e. all CAMEO groups/users)

Only for public info (e.g a list of all SubSDAs Content Managers, general documents related to exercises etc)

Calendar

MILEX x

- Documents
- DISTAFF
- OHQ ?
- ...

During preparation/conduct of the exercise:

- One Power Content Manager (from EUMS) assigned by EUMS (e.g. an IMC for the exercise).

After the end of the exercise:

- Removal of Content Manager roles.**
- TBD who should have access.**

ML y

- Documents
- DISTAFF
- OHQ ?
- ...

Remarks for the new SDA structure

- Top level SDA CMs can also create new SDAs under the root.
 - *can be controlled by CAMEO Managers/Administrator.*
- Top level & sub SDA CMs cannot delete SDAs they have created. They have make a request to a CAM.
 - *small extra workload for the CAM.*
- The "Documents" folder of the top level SDAs is not a private space, since all users (having been granted associate rights to all top level SDAs) have access to it.
 - *info of common interest can be uploaded there (eg list of SDA CM, contact info etc).*
- Special procedure will have to be agreed upon and applied for "specific" SDAs (e.g. operations, missions, exercises) **after the end** of the corresponding activity (*who should become the content manager, who should have read rights etc*)
 - *have to be defined in advance.*
- When it comes to operations & exercises, the use of the designated OHQ SDA (under the MS top level SDA) or the operation/exercise SDA will have to be clarified.
 - *have to be defined in advance*

- Other issues
 - Broken card readers,
 - Check of implemented security roles.

Common\Corporate Naming Convention

- Mixed
 - Solan users – personal names (84%)
 - External users – functional names
- Functional Names – Business Continuity

Action List

| Activity | Main Player | Contributor | Proposed Deadline | Remark |
|----------------------------|-------------|-------------|-------------------|--------------------------|
| SDA structure - creation | EUMS-IMC | IBS7 | 20.05 | |
| Migration to new structure | IBS7 | EUMS-MILSAT | 20.05 | MILSAT – archive process |
| Broken Card Readers | EUMS-MILSAT | | | |
| List of Content Managers | IBS7 | EUMS | 20.05 | Permanent Update |
| List of TopLevel Managers | IBS7 | EUMS | 20.05 | |

Coordination meeting 23.05.2016 09:30
