<Company Name>

<Project Name> Development Case

Version <1.0>

[Note: The following template is provided for use with the Rational Unified Process M. Text enclosed in square brackets and displayed in blue italics (style=InfoBlue) is included to provide guidance to the author and should be deleted before publishing the document. A paragraph entered following this style will automatically be set to normal (style=Body Text).]

[To customize automatic fields in Microsoft Word (which display a gray background when selected), select File>Properties and replace the Title, Subject and Company fields with the appropriate information for this document. After closing the dialog, automatic fields may be updated throughout the document by selecting Edit>Select All (or Ctrl-A) and pressing F9, or simply click on the field and press F9. This must be done separately for Headers and Footers. Alt-F9 will toggle between displaying the field names and the field contents. See Word help for more information on working with fields.]

Development Case

1. Introduction

[The introduction of the **Development Case** provides an overview of the entire document. It includes the purpose, scope, definitions, acronyms, abbreviations, references, and overview of this Development Case.]

1.1 Purpose

[Specify the purpose of this **Development Case.**]

1.2 Scope

[A brief description of the scope of this **Development Case**; what Project(s) it is associated with and anything else that is affected or influenced by this document.]

1.3 Definitions, Acronyms, and Abbreviations

[This subsection provides the definitions of all terms, acronyms, and abbreviations required to properly interpret the **Development Case**. This information may be provided by reference to the project's Glossary.]

1.4 References

[This subsection provides a complete list of all documents referenced elsewhere in the **Development Case**. Identify each document by title, report number (if applicable), date, and publishing organization. Specify the sources from which the references can be obtained. This information may be provided by reference to an appendix or to another document.]

1.5 Overview

[This subsection describes what the rest of the **Development Case** contains and explains how the document is organized.]

2. Overview of the Development Case

2.1 Lifecycle Model

[Briefly describe the lifecycle model employed by the project including descriptions of the milestones and their purpose. The purpose is to serve as an introduction to the rest of the development case, not to be a project plan.]

2.2 Disciplines

[Describe which disciplines the development case covers.]

2.3 Discipline Configuration

[Explain how the discipline configuration works. Explain the details described in the Discipline sections and use the following text as a starting point.]

The purpose of this section is to explain how the discipline configuration works. This includes an explanation of the purpose for the various tables and for each of the sections that describe the various disciplines listed in the section titled *Disciplines*.

2.3.1 Workflow

[This section needs to detail any changes made to the structure of the workflow itself. Typical changes include adding activities to describe company-specific ways of working, or removing activities.]

2.3.2 Artifacts

[Using a tabular format, this section describes how the artifact will be used. Additional 'local' artifacts can be

| <project name=""></project> | Version: <1.0> |
|-------------------------------------|-----------------------------|
| Development Case | Date: <dd mm="" yy=""></dd> |
| <document identifier=""></document> | |

added to the table as needed.]

| Artifacts | How to Use | | | Review | Tools Used | Templates/ | |
|-----------|------------|------|-------|--------|------------|------------|----------|
| | Incep | Elab | Const | Trans | Details | | Examples |
| | | | | | | | |

2.3.2.1 Explanation of the table

| Column Name | Purpose | Contents/Comments | | | | |
|--------------------|---|---|--|--|--|--|
| Artifacts | [The name of the artifact.] | [A reference to the artifact in the Rational Unified Process or to a local artifact definition held as part of the development case.] | | | | |
| How to Use | [Qualify how the artifact is used across the lifecycle.] | [Decide for each phase: Must have Should have Could have Won't have These are defined in Guidelines: Classifying Artifacts.] | | | | |
| Review Details | [Define the review level, and review procedures to be applied to the artifact.] | [Decide on the review level: | | | | |
| Tools Used | [Definition of the tool (or tools), used to produce the artifact.] | [References to the details of the tools used to develop and maintain this artifact.] | | | | |
| Templates/Examples | [The templates to be used and examples of artifacts using the templates.] | [References to templates and examples. This could be referenced to either the templates and examples in the Rational Unified Process, or to local templates and examples. This column may also contain references to actual artifacts that provide additional help to the project members.] | | | | |

2.3.3 Notes on Artifacts

[This section has three main purposes:

• It contains a list all artifacts that you Won't use and the motives behind your decision for not using them.

| <project name=""></project> | Version: <1.0> |
|-------------------------------------|-----------------------------|
| Development Case | Date: <dd mm="" yy=""></dd> |
| <document identifier=""></document> | |

- It contains a reference to the project's Configuration Management Plan, which describes the configuration management strategy to be used when working on these artifacts. The Configuration Management Plan allows developers to answer questions such as:
 - When do I release my artifact?
 - Where do I put my newly created or modified artifact?
 - Where do I find existing artifacts for the project?
- If the Development Case is a an organization-level development case, this is where you add notes on what each project will consider when they decide what to do with the artifact. Use the predefined table below as a starting point.]

| Artifacts | How to Use | Reason |
|-----------|------------|--------|
| | | |

2.3.4 Reports

[This section lists the reports to be used. Additional local reports are added to the table as needed.]

| Reports | How to Use | Templates/Examples | Tools Used |
|---------|------------|--------------------|------------|
| | | | |

2.3.5 Notes on the Reports

[This section has two purposes. First, it will list all reports that the project has decided it **Won't** use and the motives behind why it decided not to use them. Secondly, if the Development Case is an organization-level use case, this is where you add notes on what each project needs to consider when they decide what to do with the report.]

2.3.6 Additional Review Procedures

[This section captures any additional review procedures that are required for the artifacts used in the discipline. These supplement the general Review Procedures described in the Overview section of this document.]

2.3.7 Other Issues

[This section captures any outstanding issues with the discipline's configuration and can be used as an issues list when the Development Case is being built.]

2.3.8 Configuring the Discipline

[This section is used if the Development Case is an organization-level development case. This section contains references to helpful information for use when configuring the discipline. This section can be removed by a project.]

2.4 Artifact Classification

[Introduce the artifacts and the classification scheme. Use the following text as a starting point.]

An artifact is a deliverable of the process. It is often developed within one core workflow, although there are exceptions. The artifacts are organized in the workflow where they are created. To describe how an artifact will be used, we use the following classification scheme (see Guidelines: Classifying Artifacts for details):

- Must
- Should
- Could
- Won't

| <project name=""></project> | Version: <1.0> |
|-------------------------------------|-----------------------------|
| Development Case | Date: <dd mm="" yy=""></dd> |
| <document identifier=""></document> | |

2.5 Review Procedures

[Introduce the review levels and any additional review procedures, using the following text as a starting point.]

The project uses the following review levels:

- Formal-External
- Formal-Internal
- Informal
- None

For details see Guidelines: Review Levels.

2.6 Sample Iteration Plans

2.6.1 Inception Phase

[List the sample iteration plans used during Inception.]

2.6.2 Elaboration Phase

[List the sample iteration plans used during Elaboration.]

2.6.3 Construction Phase

[List the sample iteration plans used during Construction.]

2.6.4 Transition Phase

[List the sample iteration plans used during Transition.]

3. Disciplines

3.1 Business Modeling

[See the section titled Discipline Configuration that describes what each of the following sections needs to contain.]

3.1.1 Workflow

4. Roles

[This section is used for the following purposes:

- To describe any changes in the set of roles; for example, it is common to refine the role Stakeholder into more than one role.
- To map job positions in the organization to the roles in the Rational Unified Process. The reason for this is that in some development organizations there are job positions defined. If these job positions are commonly used and have a wide acceptance within the organization, it may be worth doing a mapping between the roles in the Rational Unified Process and the job positions in the organization. Mapping job positions to roles makes it easier for people in the organization to understand how to employ the Rational Unified Process. The mapping can also help people understand that roles are not job positions, which is a common misconception.]
