Message to CAMEO stakeholders regarding GMM

Dear colleagues,

I would like to submit to your attention a presentation depicting a Group Management Model that could be implemented in CAMEO. The goals of this presentation are the following:

1. To raise the level of awareness regarding granting access rights of accounts to folders/documents via groups, in a more effective and convenient way.

2. To kindly ask for your agreement to start using it within CAMEO, in order to streamline the administrative process for the upcoming exercises and in general, concerning any other SDA.

3. To set the ground for further communications regarding administrative aspects that can be implemented and to invite you to submit any kind of suggestions that can contribute to an improved way of administering CAMEO from a Content Manager perspective.

The main administrative objects and mechanisms (Local/Global Groups, Access Rights and Extended Access Rights) are already available in CAMEO and are/can be used in daily administrative activities.

Please give me your feedback regarding this model, its usefulness and any other remarks that would make its implementation a success.

Best regards,

4. To propose an extended way of using groups by defining a standardized way of automatically giving access rights to accounts based on a temporary need to know/share and permissions, that can be designed at the group level. This way, all is left for CAMEO Managers/Content Managers is to exclude the respective accounts (or to deactivate them, in the case of using functional accounts during exercises) from the groups they were assigned to, once their need of access to the respective folders/documents ceases to exist.
